Modernize Without Compromise

InFlight's groundbreaking approach transforms the Oracle's PeopleSoft Campus Solutions user experience from desktop to mobile without sacrificing existing business logic, customizations, or security.

Company Overview

InFlight Corporation develops and curates technology that allows its clients to economically extract maximum value from their line-of-business and learning management systems. Our software has proven valuable in higher-education institutions and across industry verticals, for customers with just a few hundred users to those with more than 100,000 users worldwide.

Integration Overview

InFlight allows you to reinvent Oracle's PeopleSoft Campus Solutions look and feel, optimize the presentation, and improve usability for your end users. This transformed content can be surfaced directly to mobile devices, or embedded in third-party portal systems like SharePoint. InFlight works by connecting to PeopleSoft Campus Solutions web servers, requesting content the way an end user would, then transforming it using a sophisticated shaping engine. This means that the entire PeopleSoft security stack, role-based access controls, business logic, and validation rules are automatically applied—saving you from having to reinvent what you already own.

InFlight's powerful shaping engine is able to distill rendered, security-trimmed PeopleSoft Campus Solutions content into user-first and mobile-first interface designs to dramatically improve usability across all device types for both customized and delivered PeopleSoft Campus Solutions content. Users can view and make changes to their PeopleSoft Campus Solutions data without having to leave their intranet portal, or pinch-zoom to manipulate forms.

The integration of InFlight with PeopleSoft Campus Solutions allows customers to:

- Integrate content from PeopleSoft Campus Solutions into third-party portal systems like SharePoint—or directly to mobile devices—quickly, easily, and cost-effectively, without having to customize PeopleSoft Campus Solutions

Validated Integration

PeopleSoft Campus Solutions

Oracle Validated Integration gives customers confidence that a partner's integration is functionally sound and performs as designed. This can help customers to reduce deployment risk, lower total cost of ownership, and improve the user experience related to the partner's integrated offering.

Availability

Sales and Marketing Office
One Cottage St., #5-15
Mailbox #39
Easthampton, MA 01027

- Get a modern user experience across desktop and mobile devices without incurring the cost or disruption of migrating to a new ERP system
- See results quickly because InFlight installs in hours and most implementations begin and end within 7 to 10 days
- Preserve PeopleSoft Campus Solutions' native security stack and business logic

InFlight offers the following optional features:

- Single-sign-on capability
- Prepackaged sets of modernized PeopleSoft Campus Solutions content (InFlight ClearViews)
- An offline editor to enable rapid prototyping of mobile-friendly content
- An instance on premises or in the cloud

Integration Details

InFlight is an HTTP reverse proxy server paired with a powerful content shaping engine. It can reside on customer premises—on any Windows-based server (including the PeopleSoft Campus Solutions web server, SharePoint server, or standalone IIS server)—or in the cloud.

The InFlight shaping engine is a rules-based system that uses web-standard technologies like Regular Expressions, XPath, XSLT, and jQuery/CSS3 selectors to filter and shape PeopleSoft Campus Solutions content without having to modify the PeopleSoft Campus Solutions system itself. InFlight customers can deliver any PeopleSoft Campus Solutions content to mobile devices or to third-party portals, including Components, Navigation Collections, Pagelets, and Queries. InFlight is commonly used to improve the end user experience for:

- Student self-service
- Faculty self-service
- Student enrollment/View My Grades
- Student financials
